

1. Develop a Java frame with a textfield, an image and a button. Display the number clicks made on the button in the text field. Enlarge the image when the mouse is moved over the image and restore the image to original size when the mouse is moved out.
2. Create a user registration form to collect Name, Age, Mailid, Gender and contact number. Once the user clicks 'OK', validate the details and display on the next screen. If the user clicks 'Clear', Clear the fields. If the user enters no or invalid details, Display alert message.
