

Write Java program to create the following user interface.

Student Mark System

Reg No:

Name:

Subject 1:

Subject 2:

Subject 3:

Subject 4:

Subject 5:

Insert View

Delete Update

Add following features

1. Insert the data in the mysql database when 'Insert' is clicked. Before inserting, calculate average marks manually and insert in the database.
2. Display the detail of a particular student when 'View' is clicked. Otherwise show 'No records found'
3. Delete the detail of a particular student when 'View' is clicked. Otherwise show 'No records found'
4. Update the fields when 'Update' is clicked.
5. Validate all the fields
