

Create a class Payment which has fields id, payee_name, billamount and date. Create two classes Card and Cash to enable the mode of payment. Card class has card_no and pin and 12% GST. Also create two classes DebitCard and CreditCard. The transaction charges for DebitCard is 10% of the bill and the transaction charges for CreditCard is 5% along with discount of Rs.50. For Cash payment apply 12% GST.

Create a class Bill to get user inputs such as payee_name, billamount and date. For proceeding to payment, ask for mode of payment such as Card or Cash. Further, if the user chooses Card, ask for Debit card or Credit card. Calculate the final bill accordingly and print the bill receipt.

Note: Create static fields for id and it will automatically increment upon creating multiple payments.
